

Overview — how Hakum Ops works

Plain-language brief for the owner. No jargon — how money and people move through a shop day.

Overview — how Hakum Ops works

What this pack is

Share this with leadership. Tabs in the browser; every section prints in the PDF.

- **Processes** — shop day, pay rules, night close & books
- **People** — one tab per role (owner, branch, floor, sales, customer...)
- **Flowcharts** — pictures of every major workflow

The one money rule

Paid checkout tickets are the only source of day sales. Ending the shift is a cash-drawer story — it does not invent employee pay. Finance accepts the close. Then you (or your assistant) confirm floor payroll from real sales plus who clocked in.

Same-night loop (target)

1. Branch Admin submits end of shift
2. You or your assistant accept it in Finance
3. Pending floor pay shows “what they attested” next to “what checkout actually sold”
4. You confirm floor payroll (blocked until the close is accepted, when the hard gate is on)
5. Books follow paid sales — not typed overrides

Example pesos (one day, two branches)

Use this as a sanity check when reading reports.

WHAT HAPPENED	ABOUT ₱
Bacoor wash sales	2,000
Wash pool (35%)	700 — on-time earns more than someone 1 hour late
Imus wash pool (crew only)	350
Coating 10,000 minus 500 shirt → 10% + 10%	950 to crew + 950 to assigned detailer
Approved cash advance 200 off a 700 wash share	That person nets 500

Carwash salary on the close report = **wash pool only**. Detailing shares are separate.

Big picture — money path

Morning work → paid sales → night close → finance → payroll → books.
