

Process — Shop day (morning to checkout)

Clock-in, wash queue, detailing bookings, and checkout.

Process — Shop day (morning to checkout)

Shop day swimlane

Who does what from morning through payment.

Morning — who is here

Pay and car assignment only count people who really showed up.

As a crew member or Team Lead

I want to clock in at my branch (with location rules when turned on)

So that the wash pool only includes people who are actually here

- ☒ Clock can be blocked when attendance is turned off
- ☒ Geofence can require being near the shop
- ☒ Owner account does not use the floor clock
- ☒ Present and late can be given a car; absent cannot

Wash queue (Team Lead)

Same-day carwash only. Detailing stays on the bookings board.

As Team Lead

I want to add and move wash tickets toward payment

So that customers flow from waiting to checkout without mixing multi-day detailing

- ☒ Team Lead can open the wash queue and create tickets
- ☒ Queue is wash-only; detailing stays with Sales / Detailer
- ☒ Handoff to checkout keeps the queue number and visit group
- ☒ Adding merch keeps the handoff; adding a walk-in service starts a new ticket

Detailing bookings (Sales)

As Sales

I want to run the detailing pipeline and assign a detailer

So that coating and other detailing jobs are tracked separately from same-day wash

- ☒ Pipeline statuses from assigned through completed
- ☒ Sales can work all branches with the right permissions
- ☒ Paid detailing lands in the right sales bucket

Checkout (Branch Admin)

As Branch Admin

I want to take payment for queue tickets and walk-ins

So that paid checkout is the single truth for that day's revenue

- ☒ Cannot finish pay if a service line is incomplete
- ☒ Payment methods: cash, GCash, card
- ☒ Detailing jobs create draft commission notes (not automatic posted pay)
- ☒ Approved cash advances show on close — not as a fake sales tab
