HAKUM AUTO CARE · OPERATIONS BRIEF

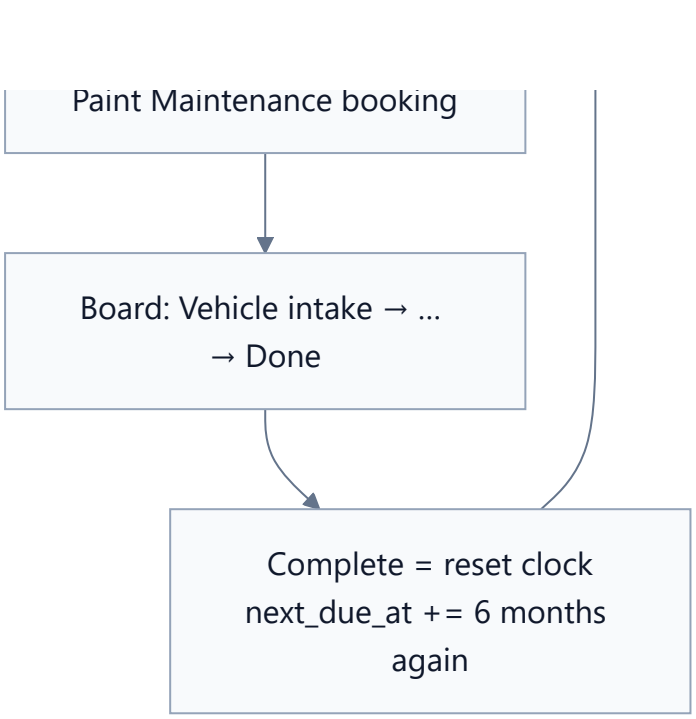

Paint maintenance — full workflow

How a car enters the 6-month paint program after Ceramic or PPF, how reminders go out, how staff check the car in when it returns, and how completing maintenance resets the clock.

One schedule per plate | Default every 6 months | Asia/Manila dates | 18 Oct 2026

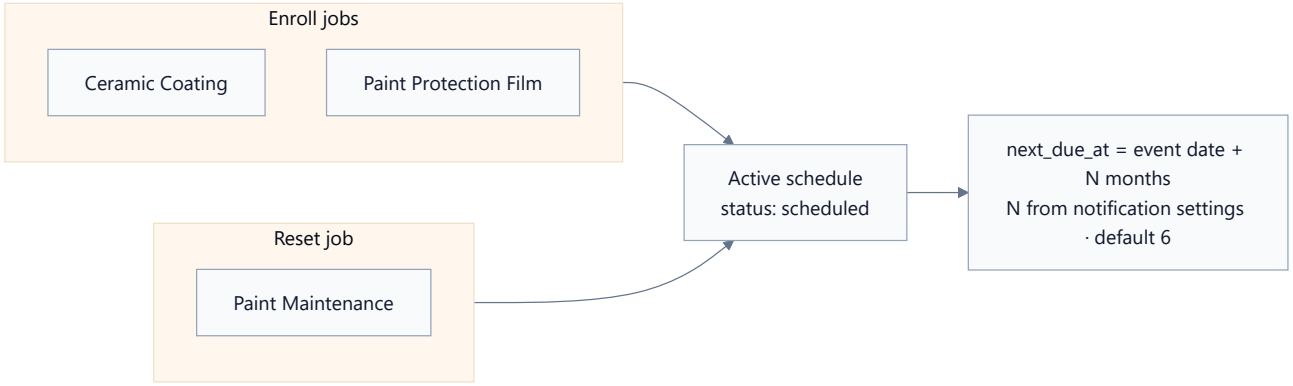

1. The loop at a glance

Ceramic Coating or PPF completed at the bay
Enroll plate vehicle_maintenance_schedules
next_due_at = complete date + 6 months
Not yet
Within 30 days of due?
Yes · monthly
BusyBee SMS + optional web push
Book paint maintenance
Customer books / walks in
Staff: Car arrived · Start intake

Dedup key: **normalized plate + program `paint_maintenance`**. A plate never gets two active schedules. Ceramic/PPF enroll; Paint Maintenance visits reset the due date.

2. Enroll vs reset

SERVICE	WHEN BOOKING IS COMPLETED	WHAT HAPPENS
Ceramic Coating	Successful release / completed	Create or refresh schedule · set `coated_at` · due in N months
PPF	Successful release / completed	Same program — still one row per plate
Paint Maintenance	Completed return visit	Keep original coated date · move `next_due_at` forward · clear last notify stamp
Tint / other detailing	—	Does not touch this program

```
Trigger: notifyBookingStatus(…, 'completed') → applyPaintMaintenanceOnComplete(…)
```

3. Timeline (example)

Ceramic finished **18 Apr 2026** · default 6 months · due **18 Oct 2026**.

DAY 0 · ENROLL
Ceramic completed. Schedule created. Status `scheduled`. Next due = +6 months.

MONTHS 1–5
Quiet. Cron looks ahead 30 days only. Ops list shows overdue / due-soon / not-yet-reminded plates.

DAY −30 · FIRST AUTO REMINDER
Within 30 days of due → SMS (and push if customer account). Stamp `last_notified_at`. Then every **30 days** until the visit.

DUE WINDOW · OPS
Bookings → Maintenance: Notify client / Remind again. Or customer books from the app link.

ARRIVAL · START INTAKE
TL / BA / OL / ASA / SA: creates Paint Maintenance booking at **Vehicle intake**, texts waiting status. Duplicate open booking → blocked (409).

COMPLETE · RESET
Clock resets. New next due = complete date + 6 months. Loop continues.

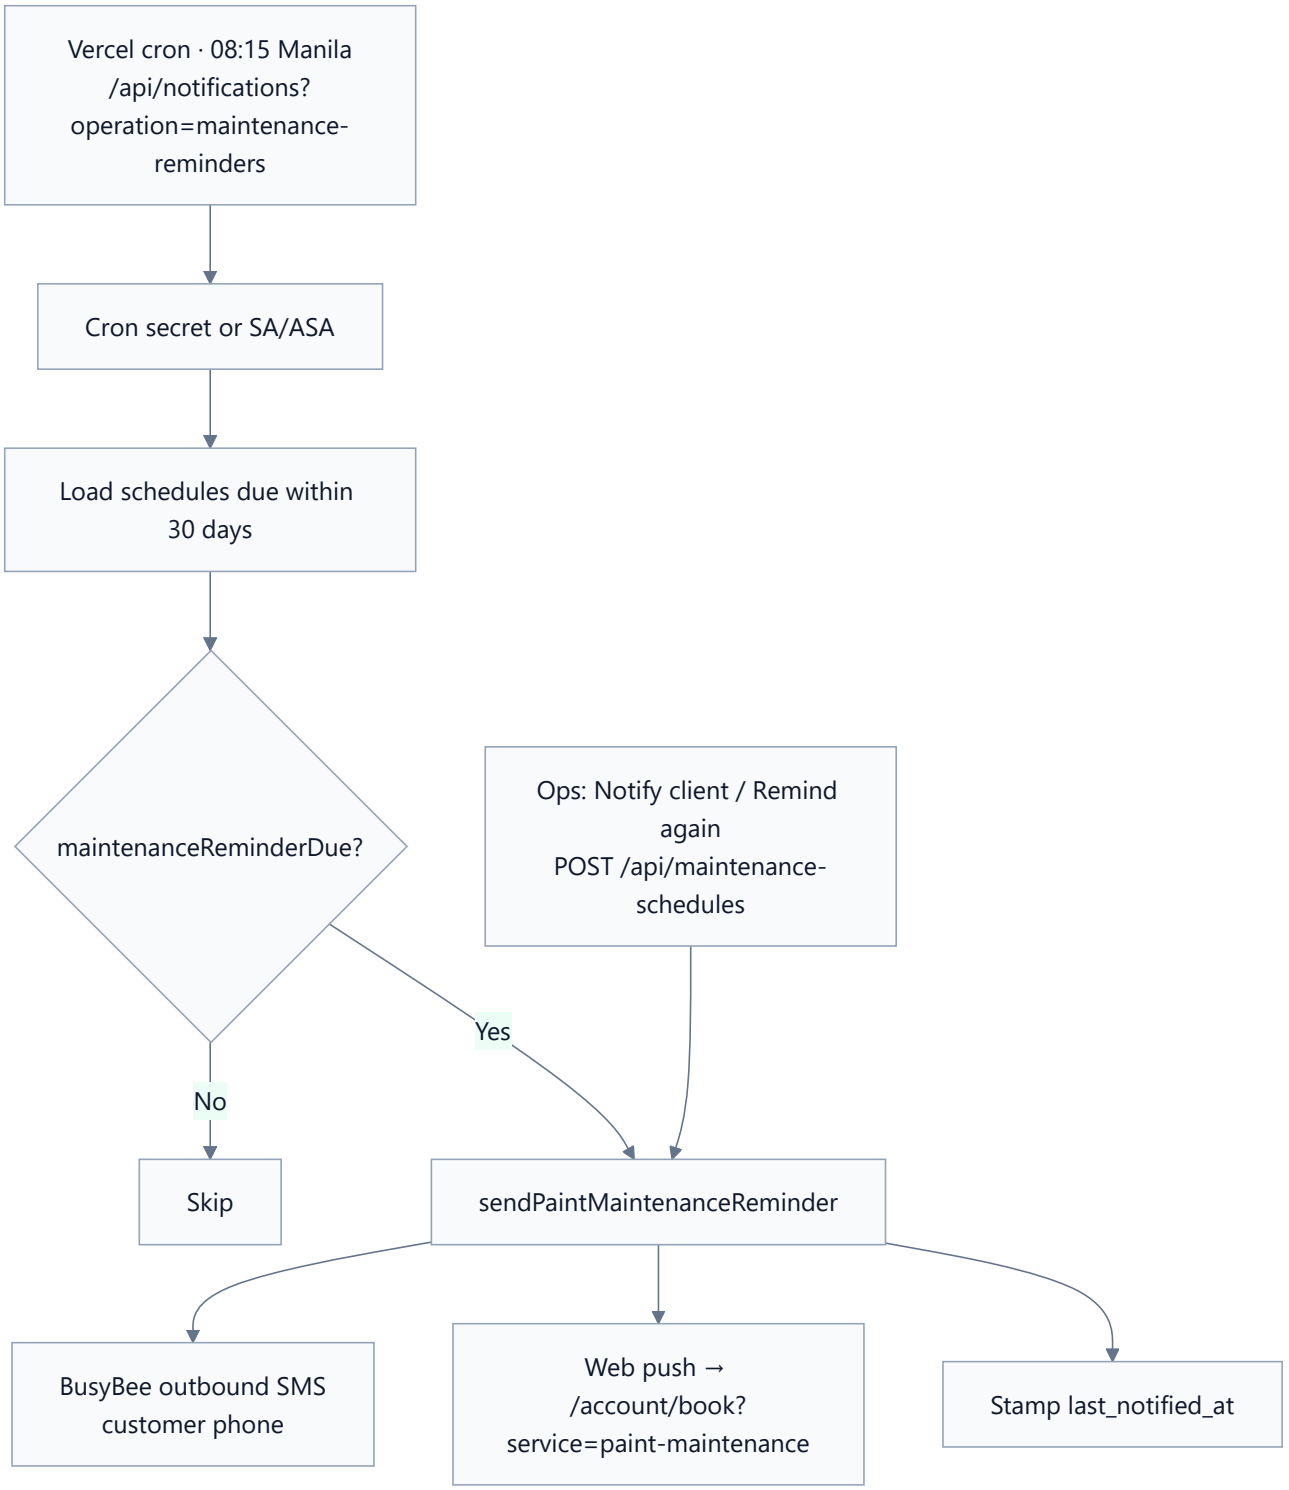

4. Reminder rules (cron + manual)

```
Lead: next_due_at within 30 Manila days
```

```
Repeat: ≥ 30 days since last_notified_at
```

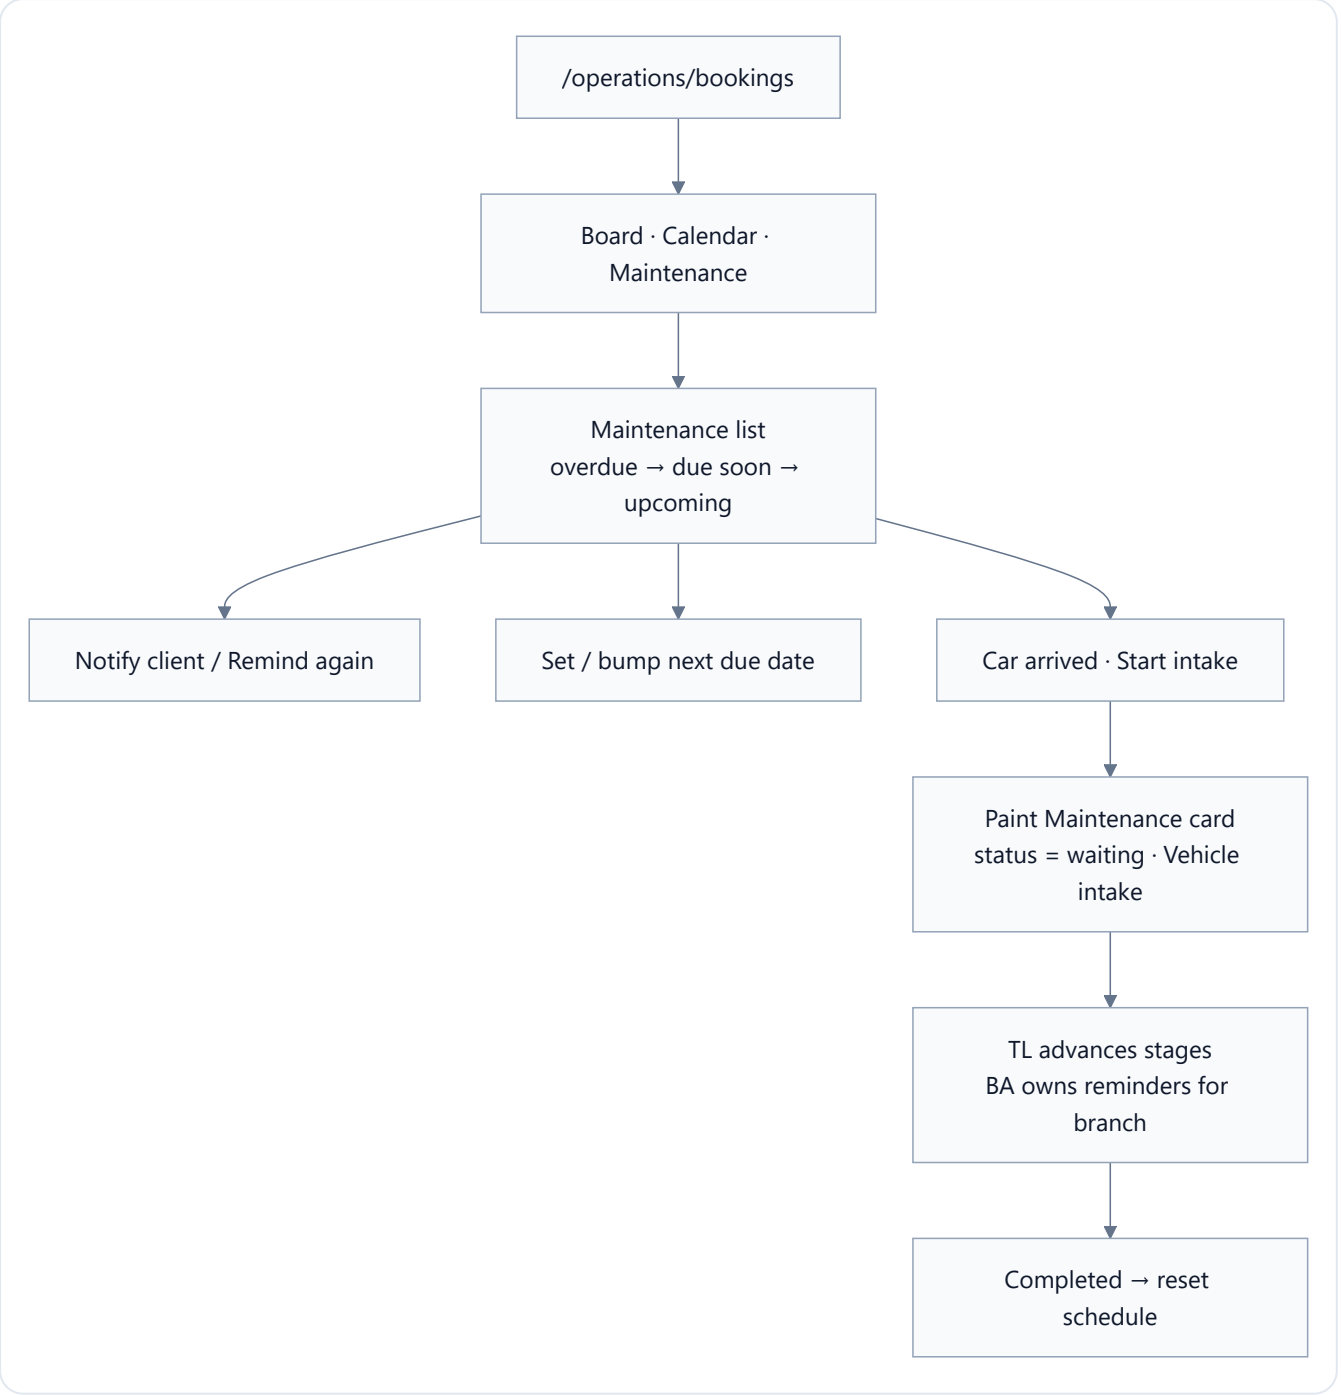

```
Statuses eligible: scheduled · notified
```

```
Channels: SMS and/or web push (settings)
```

SMS policy: outbound customer reminders only · no inbound replies · no owner daily SMS.

5. Where staff work it

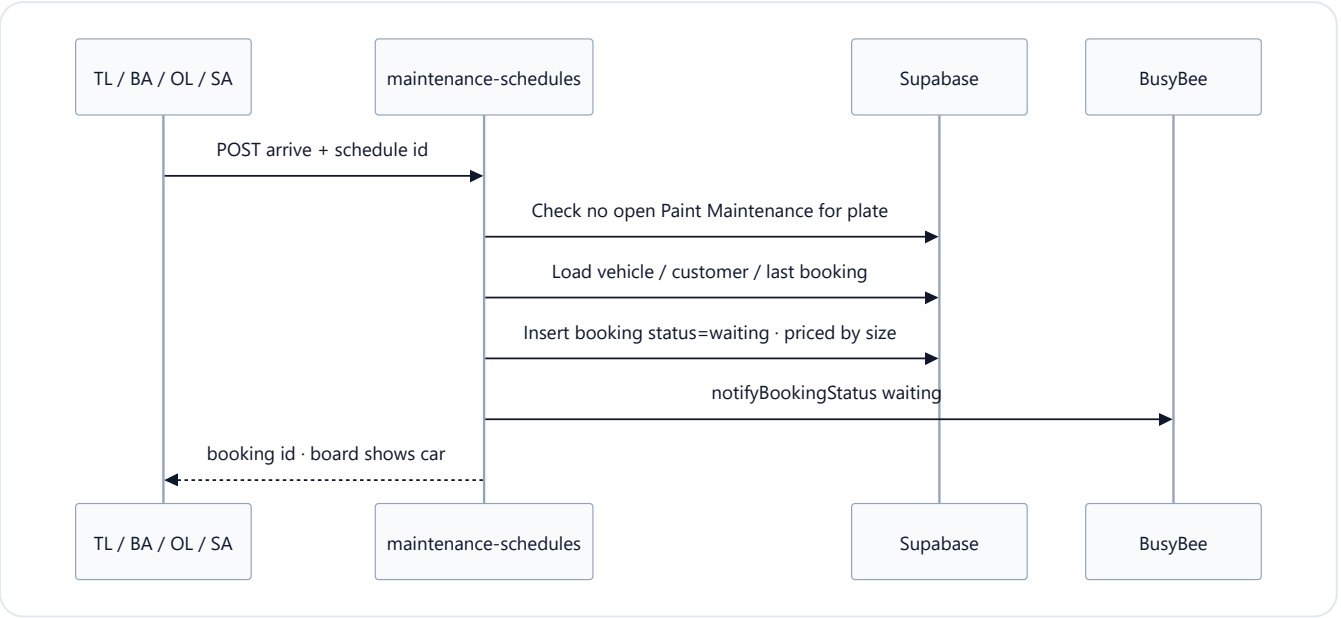

ROLE	MAY DO
Team Lead	See list · advance board · start intake at own branch
Branch Admin	Reminders for own branch · start intake · board mostly read-only
Sales / Marketing / Ops Lead	See schedules (Sales books remotely via New booking)
SA / ASA	All branches · set type intervals (6–24 months) · arrive anywhere

Urgency on the list

Overdue — past next_due_at **Due soon — within 14 days** **Upcoming — further out**

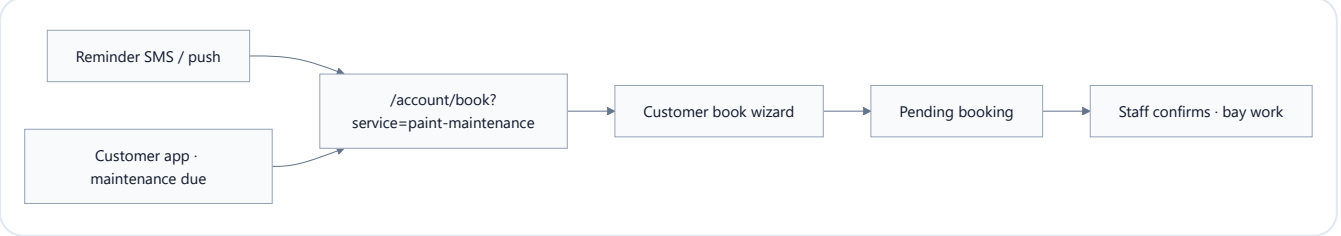

Search still finds plates that were already reminded. Open schedules follow the plate on vehicle transfer.

6. Arrival → booking (data flow)

- Needs plate, phone, and make/model on file — otherwise use **New booking**.
- Price from Paint Maintenance catalog × vehicle size.
- Notes stamped: “Paint maintenance arrival”.
- If that plate is already open on the board → error, show current stage.

7. Customer side

Portal shows schedules that need attention. Push deep-links straight into booking Paint Maintenance. Guest path still works via public /book or phone booking with staff.

8. Sanity checklist

- OK One active schedule per plate — Ceramic then PPF does not double-enroll.
- OK Completing Paint Maintenance resets due date; completing Ceramic refreshes coated date.
- OK Auto reminders start ~30 days before due and repeat monthly until the visit.
- OK Arrival creates waiting intake booking and texts the customer.
- NOTE Interval months are editable by SA/ASA (notification settings / Maintenance type row).
- NOTE This is paint maintenance — not the detailing booking 7/3/1 day SMS reminders (those are a separate cron).
