Questions for Sir Michi

Daily sheet money. 20 October 2026. Shop language.

What this note is

The daily sheet is already counting the way your formula describes. Five points below can change the money if you want them counted differently. Please answer only those five. The job list after them is so you can see what we already set. It is not a question.

1. Card, debit card, and bank transfer

A sale paid by credit card, debit card, or bank transfer is still a sale. It is inside Total sales. It does not go into Cash left, because that money is not in the cash drawer. It does not go into GCash left, because it is not in the GCash wallet. Cash left is only cash. GCash left is only GCash. Is that what you want?

2. The morning float

Cash left is only what moved today: cash sales, cash paid back on advances, minus cash expenses, cash salaries, and cash advances given out. The bills you put in the drawer at the start of the day are the opening float. They are not inside Cash left. The sheet also shows Expected cash. That is the float plus Cash left. That is the amount the count should match. Over or short is the counted cash minus Expected cash. Do you want both numbers: Cash left, and Expected cash?

3. Cash advance given out

When the branch gives a staff member a cash advance, that money leaves the drawer. Your note says this is deducted from the money left, and it is not an expense. The written sum did not show the minus. The sheet does subtract it, and it does not treat it as an expense, so it does not reduce profit. When the staff member pays it back, that amount is added to Cash left or GCash left, matching how they paid. It is still not a sale and not an expense. Please confirm the sheet should keep deducting the advance that was given out.

4. Salary paid from GCash

Crew pay is an expense. It reduces profit. It also reduces the wallet it was paid from. A salary marked Cash reduces the cash drawer. A salary marked GCash reduces GCash left and does not touch the cash drawer. The same rule is used for a normal expense: you choose Cash or GCash, and only that side goes down. Please confirm a GCash salary should reduce GCash left.

5. One way to pay on a ticket

Each paid ticket is all cash, all GCash, all credit card, all debit card, or all bank transfer. The register cannot split one ticket into part cash and part GCash. If a customer pays both ways, the branch rings two tickets, or rings the whole ticket as one way. Is one way per ticket enough?

Already set. No answer needed.

Same-day work stays on today's wash queue: the car wash, Express Wash, Full Care, custom wash packages, and add-ons such as engine wash. Interior detailing, full exterior detailing, mobile detailing, and glass detailing are same-day jobs too. Their sales sit with car wash sales.

Longer jobs sit on the detailing list: ceramic coating (including Premium and Platinum), nano ceramic tint, paint protection film and its levels, and paint maintenance. Premium and Platinum are levels of the ceramic job. They are not wash packages. The sheet still prints ceramic, tint, film, and paint maintenance as separate sales numbers. Coffee, drinks, and accessories stay off those numbers.

Paint maintenance is the return visit after a ceramic coating or a film install. The reminder is about six months. Doing the visit starts the clock again.

Film installs are detailing jobs on that list. Crew pay for a film job is not the ceramic crew split. We did not invent a separate film pay number.

The friend discount is whatever you save in Settings. Points stay one price for the whole company. There is no daily text to the owner when the day closes. Finance approval uses the app notification.

A debit or bank-transfer sale has not been rung at the register yet. The buttons are on the live payment list. Older sales are only cash, GCash, and credit card.
